Miles Fiberglass and Composites Answers the Call For Much Needed PPE

Miles Fiberglass and Composites of Oregon is answering the call to produce much needed PPE. Miles Fiberglass promptly switched production and was able to move labor forces to begin manufacturing Disposable Face Shields, which are critically needed by hospitals and medical workers to protect them from the COVID-19 virus.

Miles Fiberglass is working to increase production of disposable face shields with technology that can be used to replenish PPE across the nation for months to come. “I was amazed at how quickly our team took our vision of making something to contribute to first responders to a finished product,” says Lori Luchak, President of Miles Fiberglass and Composites.

About Miles Fiberglass and Composites
Founded in 1963, Miles Fiberglass and Composites is a family owned corporation with plants in Oregon City and Portland, OR. MFC has over 40 years of experience in the fiberglass and composites industry.

Miles Fiberglass & Composites, Inc. has grown to produce a variety of products using open molding, vacuum bagging, press molding, and resin transfer molding (RTM) processes. Miles Fiberglass & Composites, Inc. originally manufactured products such as air conditioning unit covers and canoes. Now, the company has expanded its capabilities to provide products to the transportation, military, communications and industrial industry.
